

# How to Crack Nord VPN Accounts Easily!

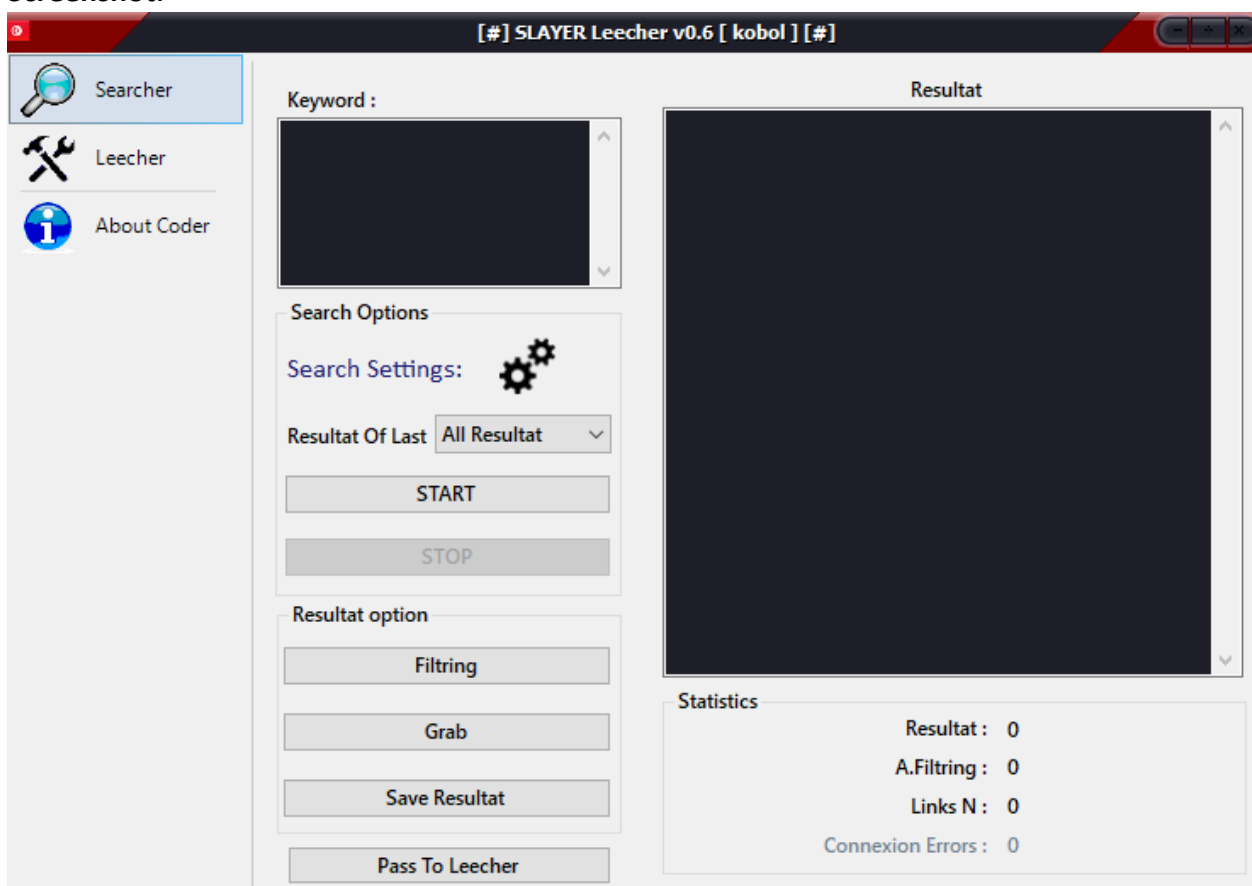

By CrackHub

Hello everyone, in this pdf you will find a **full** Step-by-Step tutorial on how to easily crack Nord VPN Accounts. Of course you can apply this same method to other types of accounts, but I will provide download links and screenshots for Nord VPN in this document. I am sorry that I use short links with ads in this tutorial but it's the only way I could make money for my time and effort of making this.

## What Do I Need to Have?

1. **Slayer Leecher**, Slayer Leecher is a Program that is used to Search <https://pastebin.com> Links that include **Combolist**s. These lists are essentially huge lists of accounts, the accounts are formatted like this: e-mail:password (example: "fake@gmail.com:HelloHello123"). The Program slayer leecher then searches the internet for these lists using Keywords you will provide. Leading us to our next point.

### Screenshot:

Download Link: <https://ouo.io/AF42Aa>

2. **Keywordtool.io**, <https://keywordtool.io> is a website, you can input one keyword, for example: “nordvpn” And the program will output a list of frequently used keywords or sentences that include the keyword you typed in.

**Screenshot:**

The screenshot displays the Keyword Tool Pro interface. At the top, there's a navigation bar with links like 'Find Keywords', 'Analyze Competitors', and 'Check Search Volume'. Below this, a search bar contains the keyword 'nordvpn'. The results section shows a list of keywords with their search volume, trend, CPC (USD), and competition. A pop-up message asks if the user needs search volume data for English keywords, suggesting the Keyword Tool Pro.

Keywords	Search Volume	Trend	CPC (USD)	Competition
nordvpn download	55,000	100%	1.00	1.00
nordvpn review	27,100	-33%	\$4.43	49 (Medium)
nordvpn coupon	18,100	-33%	\$7.36	77 (High)
nordvpn free trial	55,000	100%	1.00	1.00
nordvpn netflix	55,000	100%	1.00	1.00
nordvpn hacked	55,000	100%	1.00	1.00
nordvpn price	55,000	100%	1.00	1.00
nordvpn vs expressvpn	55,000	100%	1.00	1.00
nordvpn reddit	55,000	100%	1.00	1.00
nordvpn login	55,000	100%	1.00	1.00
nordvpn account	55,000	100%	1.00	1.00
nordvpn apk	55,000	100%	1.00	1.00
nordvpn apple tv	55,000	100%	1.00	1.00

Do You Need This Information?  
Keyword Tool Pro Provides Search Volume Data For  
English Keywords. Try It Now!

3. **Openbullet [Anomaly]**, Openbullet is the program that we will use to scavenge our combolists to **Check For** working Accounts. Openbullet is an empty program in itself, you need configs created by users for it to work. Don't worry I have included 2300+ Configs in this pack.

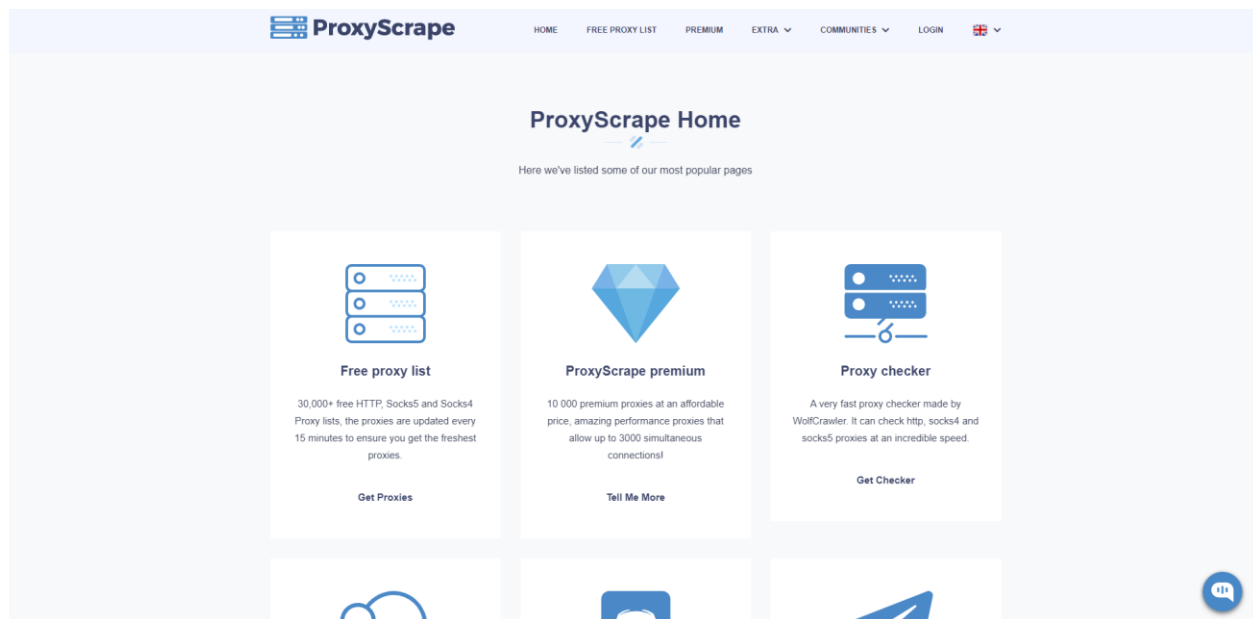

**Screenshot:**

The screenshot displays the OpenBullet 1.4.3 [Anomaly] application interface. The top menu bar includes Runner, Proxies, Wordlists, Configs, Hits DB, Tools, Settings, and About. The main window is divided into several sections:

- Runner:** Shows 'Start: 1' and 'Prog: 964 / 5630 (17%)'. A 'STOP' button is visible.
- Proxies:** A list of proxies with columns for Id, Data, and Proxy. The list includes entries like 'robineau.antoine@hotmail.fr:Antoir' and 'nlabutin5@gmail.com:Lebron2345'.
- Hits:** A table showing hits with columns for Id, Data, Proxy, Type, and Capture. The table lists various hits with expiration dates.
- Summary:** A section at the bottom right showing 'DATA' and 'PROXIES' statistics. The 'DATA' section includes 'Total: 964', 'Hits: 351', 'Custom: 0', 'Bad: 501', 'Retries: 100477', and 'To Check: 112'. The 'PROXIES' section includes 'Total: 3531', 'Alive: 2170', 'Banned: 524', 'Bad: 837', 'CPM: 5', and 'Credit: \$0'.

Download Link: <https://ouo.io/J3s5X0>

4. **Proxies**, you will need proxies to hide your real IP- Address while checking the combolists. This is just a security measure to ensure that you don't get into any trouble. We will get our proxies from <https://proxyscraper.com> . The proxies are free and good enough for our purposes, however if you want to be serious about cracking you need to invest a little bit of money into HQ(High Quality) Proxies.

## How to use the tools

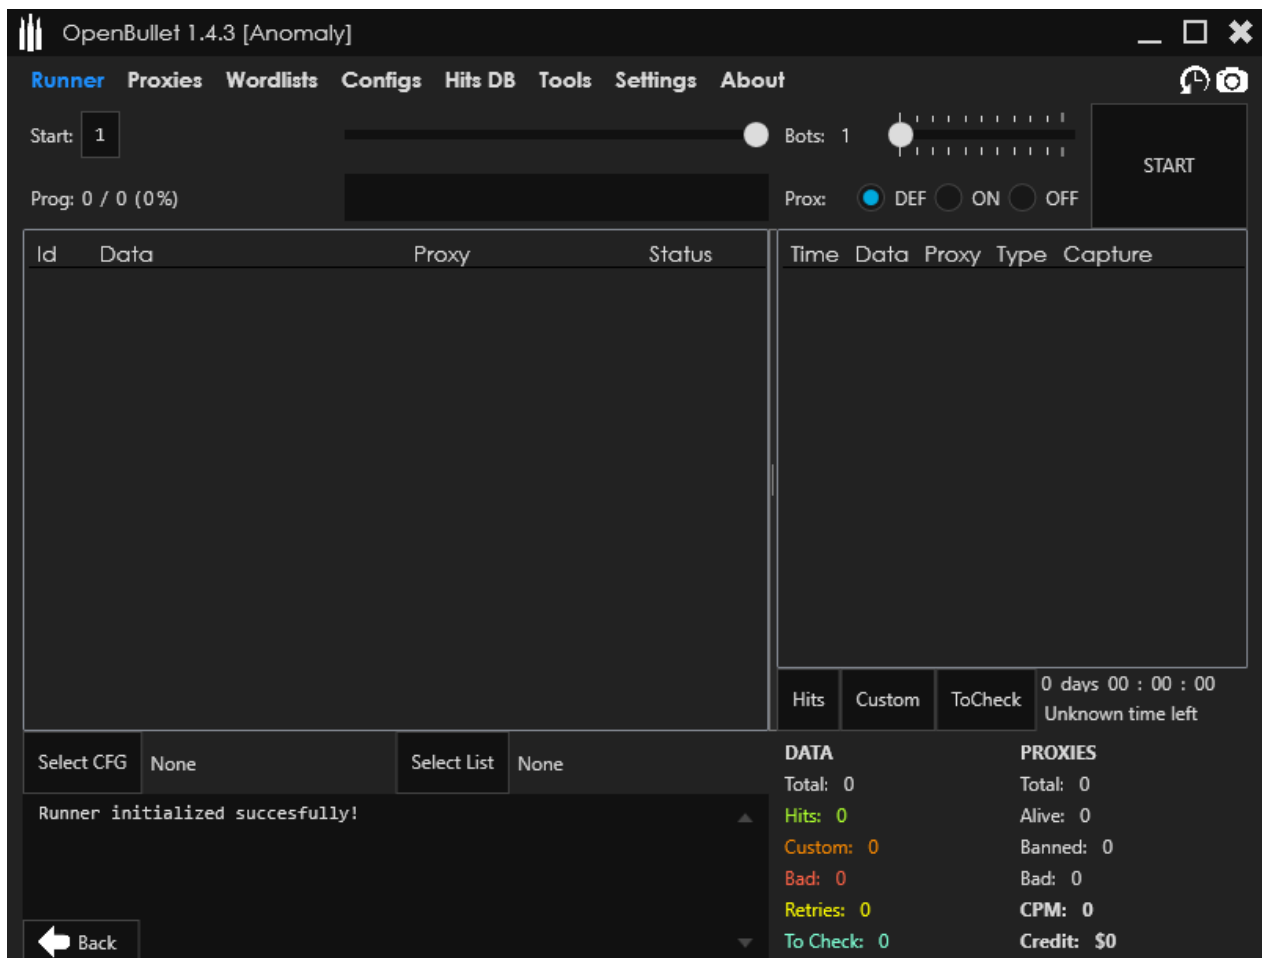

In this part of the tutorial you will learn how to use all of the tools I provided above in unison. This will be described in a straight forward Step-by-Step way.

1. Go to <https://keywordtool.io> and type in Nord VPN.
2. At the bottom left, click on copy all to clipboard.
3. Open slayer leecher and paste the keywords in the Text Box marked as "Keyword:"
4. Click on the gears next to "Search Settings:" and **Only** select <https://pastebin.com>
5. Click on the Drop-Down Menu next to "Resultat of Last" and select Custom, then don't change anything and click "oke"
6. Then click "Start" and wait for the number underneath the big black box get to ~5000

7. Click on "Filtering"
8. Click on "grab", you should see the black box on the right fill up with pastebin.com Links.
9. Then hit "pass to leecher" at the bottom
10. Hit start and wait until the number of "Used Link (n)" Matches the number of "Loaded Links".
11. Click on "Remove duplicates"
12. Save your result to a location where you can find it.

### Now you Have your combolist!

13. Go to <https://proxyscrape.com> and click on "Get Proxies" under "Free Proxy List".
14. Choose the proxy type "SOCKS4", as it usually has the most proxies.
15. Open Openbullet [Anomaly] From the link Above
16. Click on "New" in the top left and click anywhere on the runner.
17. Now You should see this:

18. Click on "Proxies" At the top and hit "Delete All" if you have any proxies there
19. Click on "Import"
20. Click on the Folder Logo next to the text box named "Location:" and choose the socks 4 proxy list you got from <https://proxyscrape.com>
21. Click on the Drop down menu named "Type" And choose "Socks 4" and click "accept"
22. Then click on "Wordlists" At the top
23. You should see some .txt files in there, just ignore them and click on "add"
24. Click on the folder logo next to the text box named "Location" and choose your combolist

25. Click on "accept"
26. Go back to the runner tab by clicking on "runner" at the top
27. Click on "Select CFG", you should see lots of configs there, just click on the search bar and type "nord vpn". Choose any of the configs (I recommend The ones from "Ruri")
28. Click on "Select List" and choose your combolist.
29. In the top right you should see an area marked as "prox:", it's going to be set as "DEF" Make sure to select "ON"
30. Hit start and wait for your accounts to start coming in. They should be displayed in the smaller box on the right.

## That's it!

I guarantee that you will get at least one account using this method and if you have any questions, contact me on youtube or discord:
